

Learning that adapts to every person on your team

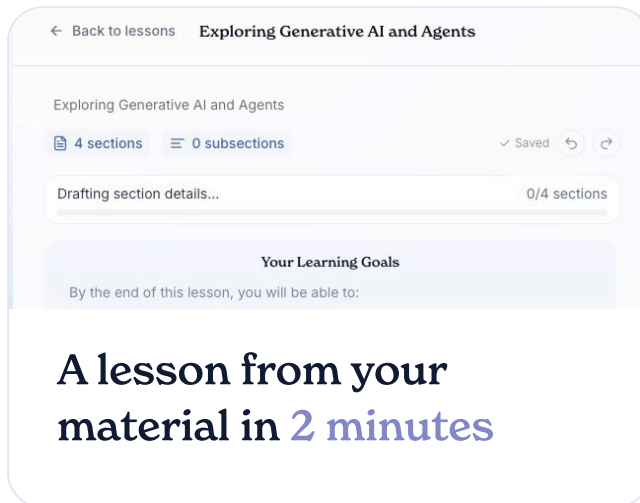

Scholé teaches through conversation. Every lesson is generated for the learner in front of it: their role, their tools, their goals. This brief shows the platform feature by feature, with real product screenshots.

Company brief August 2026

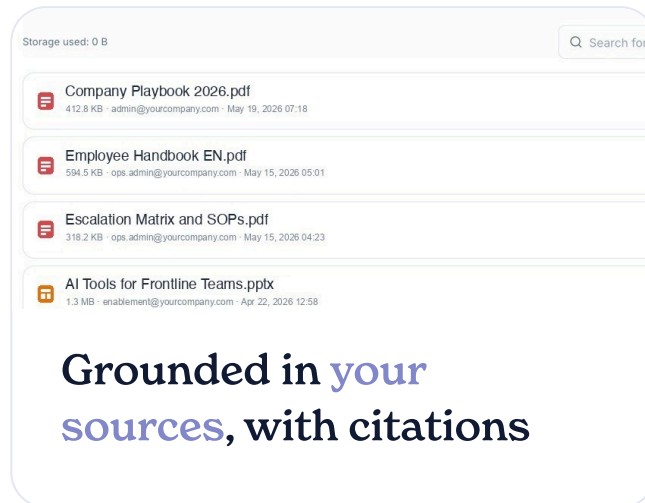

The short version

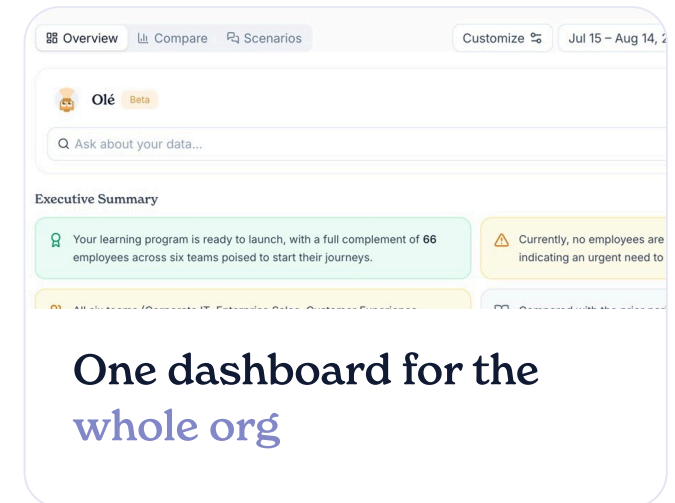

Why Scholé is useful

A lesson from your
material in **2 minutes**

Grounded in your
sources, with citations

One dashboard for the
whole org

• Already used by teams and orgs at 100s of companies

• #1 Product of the Day on Product Hunt

• SOC 2 + ISO compliance, audit ongoing

The difference

Why Scholé is different from a typical LMS

A typical LMS

- ✗ A catalog of static courses everyone clicks through
- ✗ Authoring takes weeks and specialists
- ✗ A closed ecosystem

Scholé AI

- ✓ Lessons adapted per person: their role, tools, and goals
- ✓ Anyone builds by chatting; slides, documents, and videos become lessons instantly
- ✓ Open APIs and an MCP-friendly admin

Loved by learners at

and 100s more

Engagement

People actually finish these lessons

<10%

finish a typical MOOC course

79%

finish a Scholé lesson they start

91%

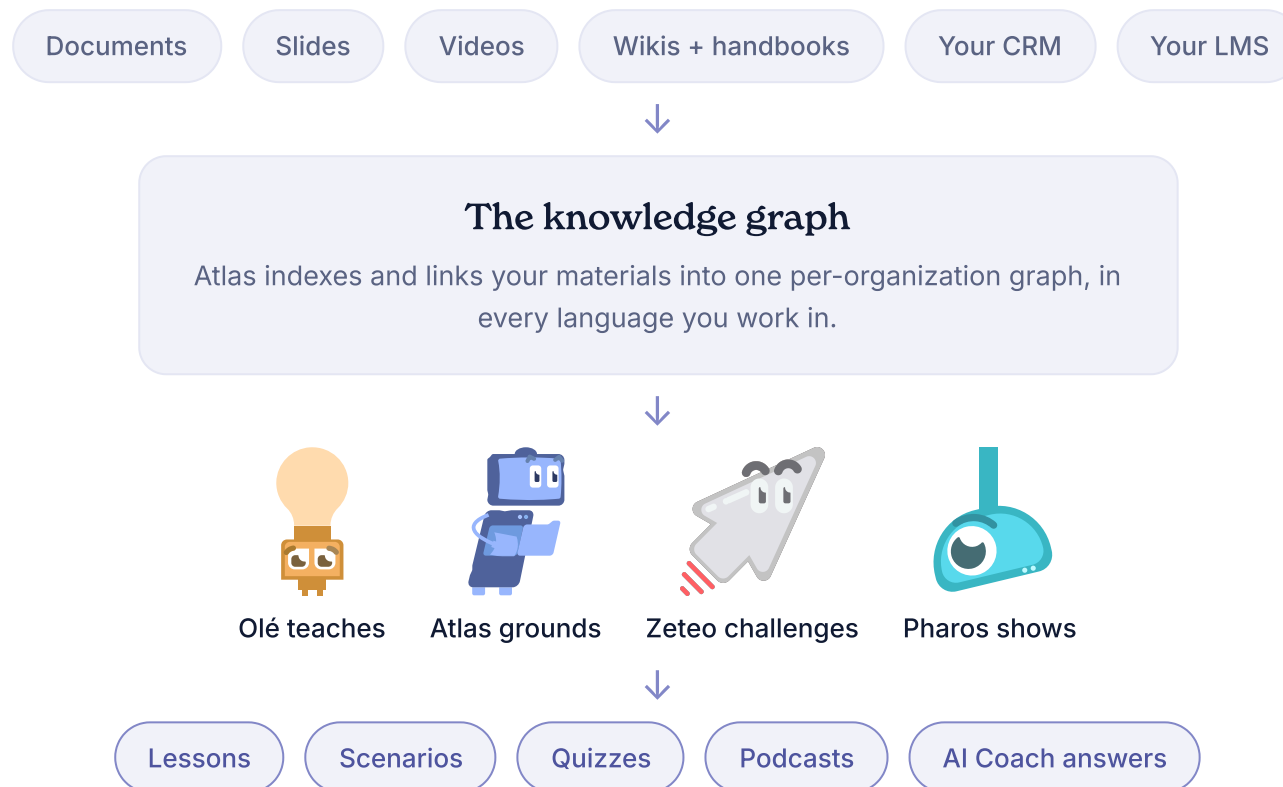

would recommend Scholé to a friend

MOOC completion across Coursera, edX, and LinkedIn Learning: Zhang et al. (2025); Reich & Ruipérez-Valiente, *Science* (2019); Jordan (2015). Scholé figures: platform data, last 30 days.

How it works

Agents connected to a knowledge graph of your materials

Everything you upload feeds one knowledge graph. The tutors teach from it.

Models and privacy

No one trains on your data

Not Scholé, and not the model providers.

No training, by design

Agents contextualize in memory, so we never need to train on your content.

Enterprise agreements

Model + infra providers run under enterprise agreements and cannot train on your data.

Azure AI for retrieval

RAG over your documents runs encrypted through Microsoft Azure AI.

Pharos here. Projecting the right videos, visuals, and shining light on the important stuff.

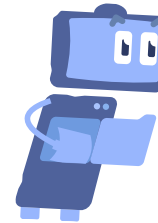

The tutors

A cast of AI tutors, not a chat window

Four characters share the teaching, so the rhythm keeps changing.

Hi! I'm Olé. DJing your lesson and intuitive explanations... all wrapped up in your favorite little lightbulb.

Atlas: Stories, analogies, and examples. How does this fit into *your* work?

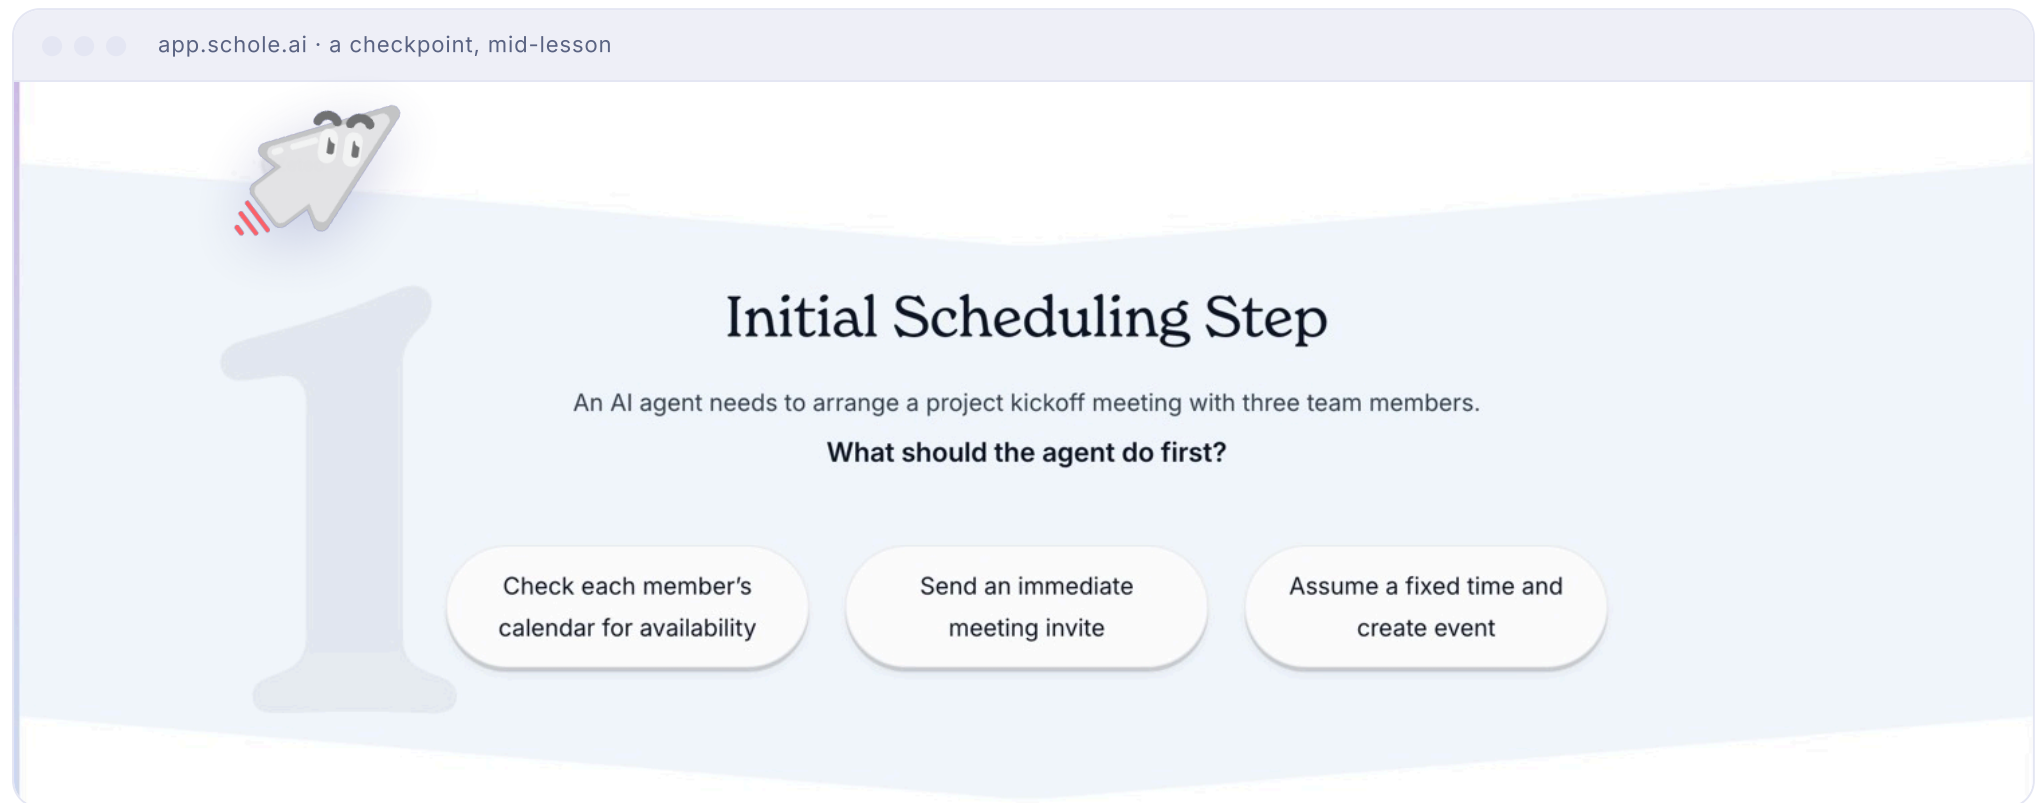

Yo! I'm Zeteo. Let's make learning practical. MCQs, GenUIs, interactive exercises...

If any of these are how you like to learn, **Scholé** was built for you.

Learner · Feature 1

Lesson delivery that feels like your favorite tutor

Lessons stream live, one idea at a time, tuned to the learner.

app.schole.ai · a checkpoint, mid-lesson

Initial Scheduling Step

An AI agent needs to arrange a project kickoff meeting with three team members.

What should the agent do first?

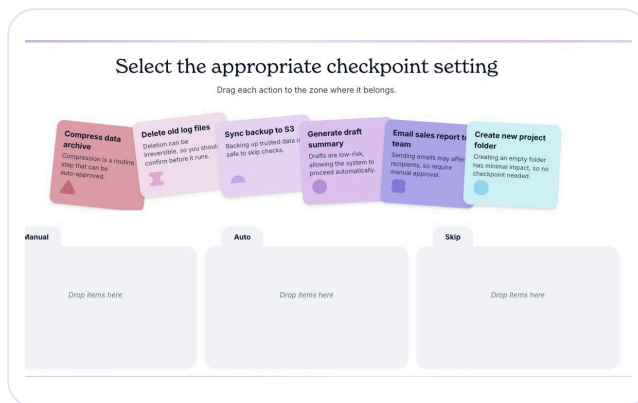

- Check each member's calendar for availability
- Send an immediate meeting invite
- Assume a fixed time and create event

And it improves itself the more you and your team interact with it.

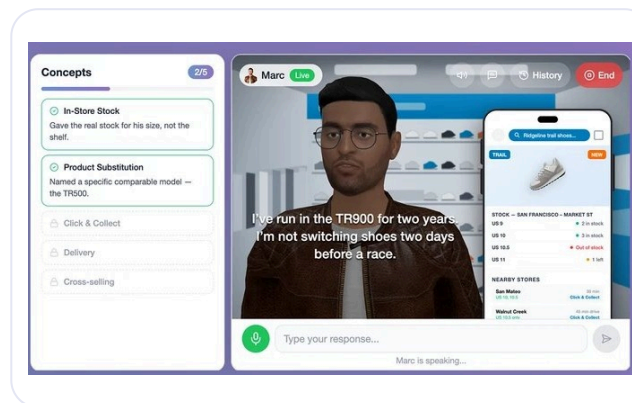

Learner · Inside every lesson

One lesson, many ways to learn

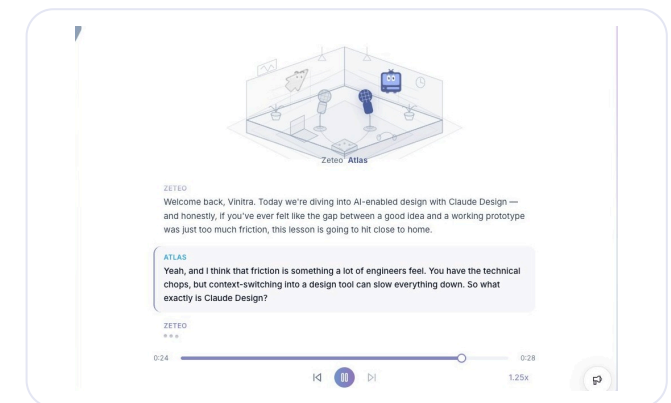

Concept, analogy, exercise, quiz, podcast, video, scenario.

Interactive exercises.

Voice scenarios.

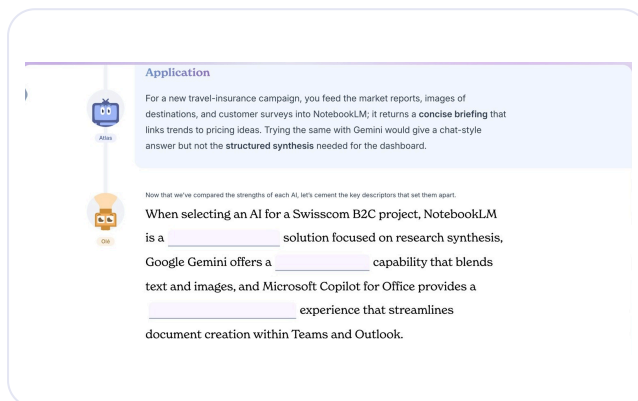

Podcast mode.

Learner · Inside every lesson

...and the formats keep coming

Over 20 modalities on the platform.

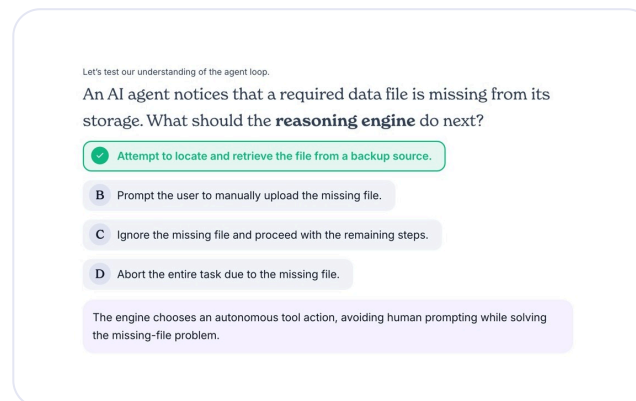

Application

For a new travel-insurance campaign, you feed the market reports, images of destinations, and customer surveys into NotebookLM; it returns a **concise briefing** that links trends to pricing ideas. Trying the same with Gemini would give a chat-style answer but not the **structured synthesis** needed for the dashboard.

Now that we've compared the strengths of each AI, let's cement the key descriptors that set them apart.

When selecting an AI for a Swisscom B2C project, NotebookLM is a _____ solution focused on research synthesis, Google Gemini offers a _____ capability that blends text and images, and Microsoft Copilot for Office provides a _____ experience that streamlines document creation within Teams and Outlook.

Analogies and fill-in-the-blanks.

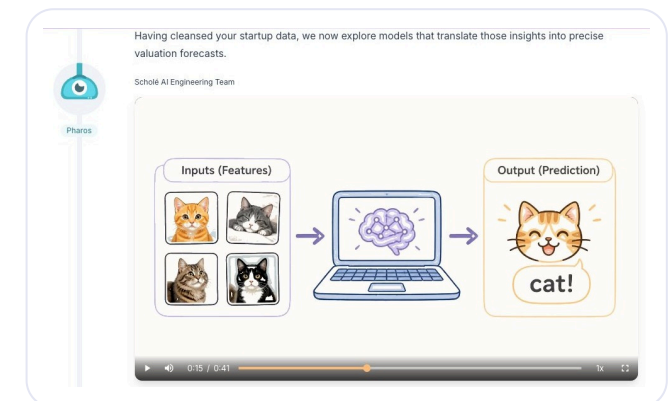

Let's test our understanding of the agent loop.

An AI agent notices that a required data file is missing from its storage. What should the **reasoning engine** do next?

- ☒ **A** Attempt to locate and retrieve the file from a backup source.
- ☐ **B** Prompt the user to manually upload the missing file.
- ☐ **C** Ignore the missing file and proceed with the remaining steps.
- ☐ **D** Abort the entire task due to the missing file.

The engine chooses an autonomous tool action, avoiding human prompting while solving the missing-file problem.

Quizzes with instant feedback.

Having cleansed your startup data, we now explore models that translate those insights into precise valuation forecasts.

Admin · Feature 6

A lesson library your org owns, authored by chat

Olé builds lessons from your documents, slides, and videos.

Describe it, or attach the doc.

Olé drafts goals and structure.

Set the goals and guardrails once

Every generated lesson follows them. Owners, admins, and learners.

Company tasks

What the organization wants people to be able to do.

- 1 Rewrite a workflow with AI**
Take one recurring task and redesign it end to end.
- 2 AI for task automation**
Automate the repetitive parts of a daily workflow.
- 3 Evaluating AI outputs**
Judge whether a generated result is actually correct.
- 4 Build a before-and-after demo**
Show the manual way, then the assisted way.

Guardrails

Rules every generated lesson has to teach within.

DO

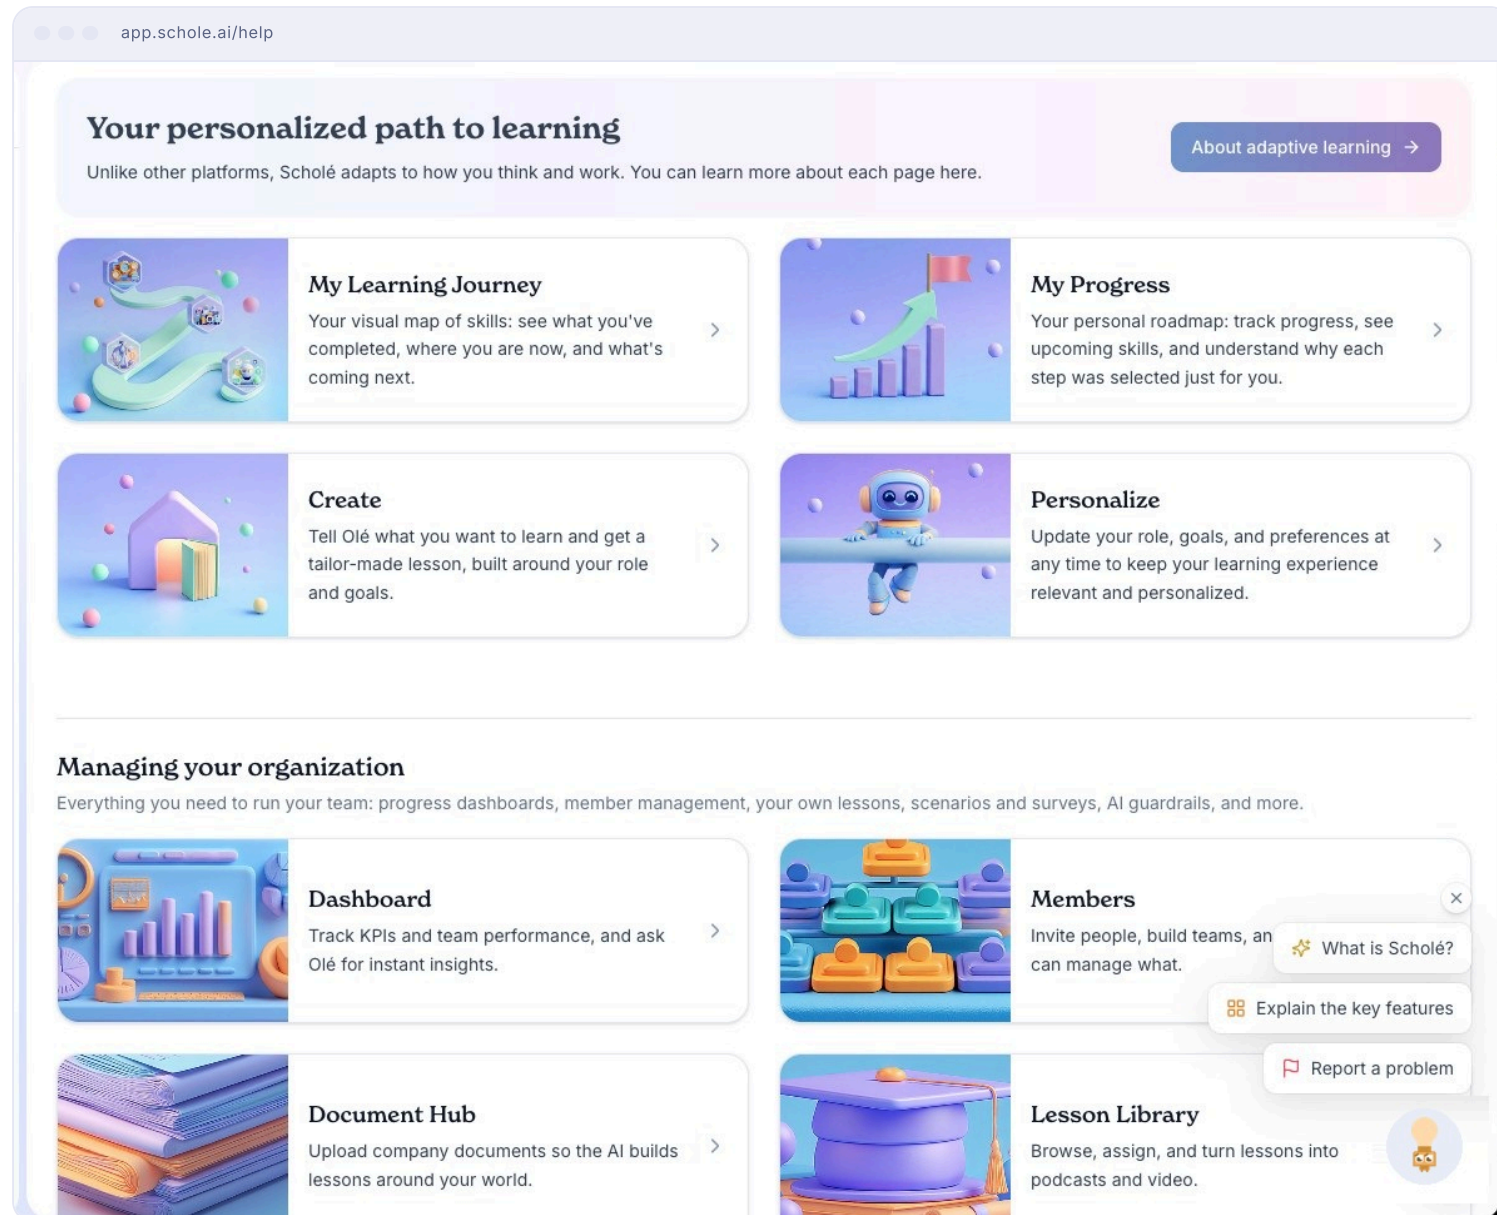

- ✓ Use our own tools and terminology in examples
- ✓ Show the human review step in every workflow
- ✓ Cite the source document behind a claim

DON'T

- ✗ Put client or customer data into a prompt
- ✗ Present a generated answer as verified
- ✗ Recommend tools outside the approved list

Holistic help pages and an enterprise support team

Every surface has an illustrated guide, plus Ask Olé in context.

Teams already learn this way

“AI fluency will set people and companies apart. And the companies that use Scholé will give their people **the advantage they need.** We work with Vini and her team at Scholé to teach Harvard Data Science Initiative students online, and **there is simply no comparison. They are the best.”**

Sam Paddock · CEO and Founder · Harvard Data Science Initiative online programs

“Bye bye **Coursera!**”

Janine, Business Development

“FINALLY a learning system that **adapts to the learner!**”

Chris, VP of Sales

“It’s **interactive**, allowing me to answer incorrectly then review. It gave me a door to understanding while incorporating it into my work.”

Jeane, Technician

“It keeps driving the **same concepts from different angles**, very helpful for my learning style.”

John, Director

“I completed the Agentic AI Intensive and **love Scholé.** I am thrilled with the progress I made in such a short time.”

Holly, Engineer · Harvard intensive

“I’m now at **Level 3** in Scholé and intend to **go all the way to the top.** I’m thoroughly enjoying it.”

Miguel, Private Equity CEO

“I’m **hard pressed to think of another learning tool** that I have enjoyed more than Scholé AI.”

Michele, Consultant

“WOW, it’s **mindblowing!** But for all the right reasons!”

Claudia, Corporate HR

Next steps

Pricing, security, and a conversation

Pricing

Individual pricing is published at schole.ai/pricing. At enterprise scale it is **heavily discounted**, and it scales with **active learners**, so you pay for the people actually learning rather than for seats sitting idle. Volume and rollout shape change the number, so the best answer is a short conversation.
